

Maine Weekly Influenza Surveillance Report

November 19, 2008

Synopsis

During the week ending November 15th, 2008 (MMWR week 46)*, Maine reported no influenza activity.

Moderate Disease Surveillance

Outpatient influenza-like illness (ILI)

During the week ending November 15th, 2008, 0.6% of outpatient visits reported by six Maine Sentinel Providers were for influenza-like illness (ILI). ILI is defined as fever ($\geq 100^{\circ}$ F / $\geq 37.8^{\circ}$ C) AND cough or sore throat in the absence of a known cause. In the New England States, 0.7% of outpatient visits were attributed to influenza-like illness during week 46.

Outpatient Visits for Influenza-like Illness -- Maine, 2007-09

New England is defined as Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont.

Severe Disease Surveillance

Hospital inpatients

During the week ending November 15th, 2008, 5.4% of hospital admissions reported by three hospitals were attributable to pneumonia or influenza. This is consistent with previous weeks.

* At time of publication, reporting may be incomplete. Numbers presented here may change as more reports are received.

Laboratory Reporting

During the week ending November 15th, 2008, nine samples were submitted for testing to the Maine Health and Environmental Testing Laboratory (HETL). To date, 25 samples have been submitted, none have tested positive for influenza.

During the week ending November 15th, 2008, one sample was submitted for testing to one private reference laboratory, it did not test positive for influenza. A combined total of 113 specimens from two private reference laboratories have been submitted for respiratory testing to date. None tested positive for influenza.

Outbreaks

During the week ending November 15th 2008, no outbreaks of influenza-like illness were reported in Maine.

Fatalities Surveillance

Death Certificates

During the week ending November 15th 2008, 8.1 % of deaths reported by two city vital records offices were attributable to pneumonia and influenza.

Percentage of Deaths Attributable to Pneumonia and Influenza – Maine, New England and the United States, 2007-09

Pediatric Fatalities

No influenza-associated pediatric deaths in Maine have been reported this season.

National Influenza Activity

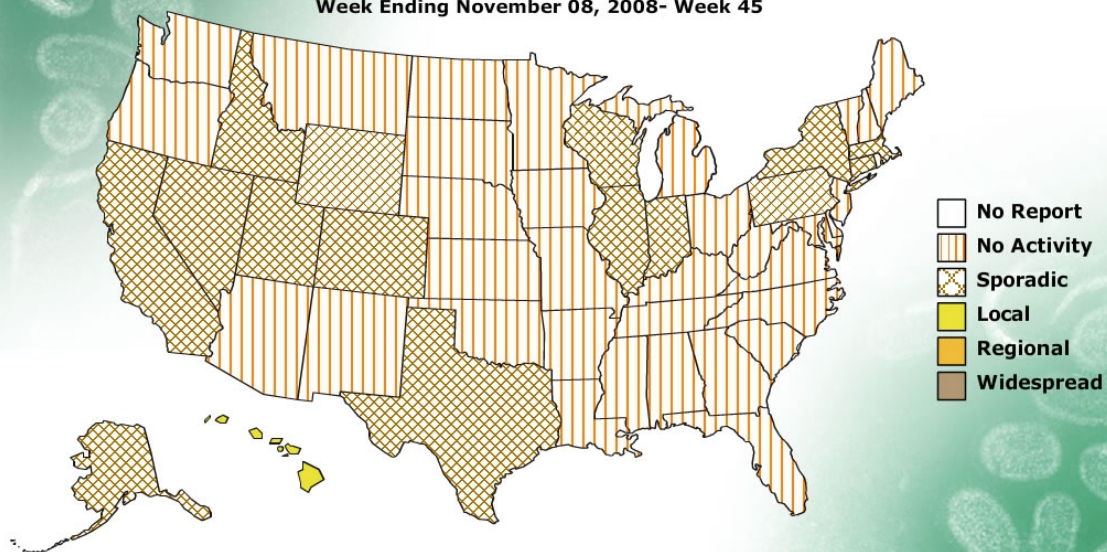

State health departments report the estimated level of influenza activity in their states each week. States report influenza activity as: 1) no activity, 2) sporadic, 3) local, 4) regional, or 5) widespread (definitions of these levels can be found at: www.cdc.gov/flu/weekly/usmap.htm). Maine reported no activity for the week ending November 15th (week 46).
